The AI Act by the EU
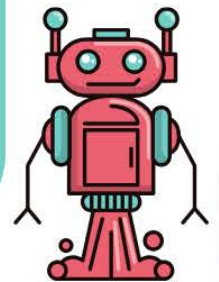

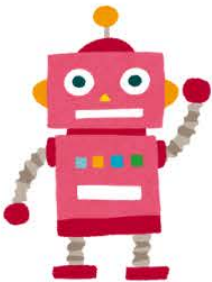

What you need to know...

In March 2024, the EU adopted the AI Act; the first ever piece of legislation on safe use and development of artificial intelligence (AI).

The Act will make sure AI is

- Safe
- Transparent
- Non-discriminatory

And it will protect our

- Wellbeing
- Safety
- Rights

Here's how it will work...

New and existing AI systems will go through a series of tests and analysis.

Each system will be put into one of four categories depending on how much risk it poses to its users.

The higher the risk, the more rules they will have to follow, with the most dangerous systems being totally banned.

DISCUSS!
Think about some of the ways you use AI every day. Which category do you think they belong in? Why?

Prohibited AI practices ←→ Unacceptable risk

Regulated high risk AI systems ←→ High risk

Transparency ←→ Limited risk

No obligations ←→ Low and minimal risk
